Subject:

Elite 6 Primaax Suspension (double drive) Retaining Bolt Torque Check

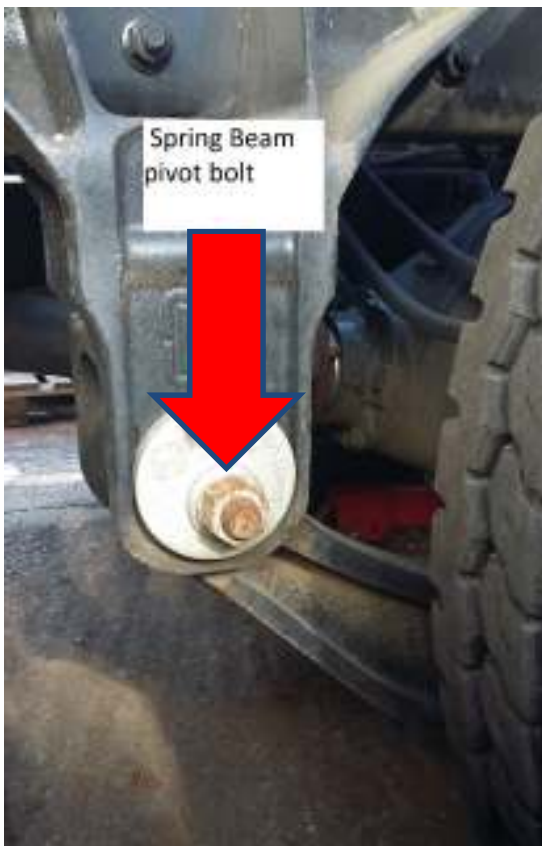

Dennis Eagle are asking all operators of Elite 6 trucks fitted with Primaax air suspension (double drive) to check the torque setting of the suspension retaining bolt on the next vehicle inspection and thereafter once every twelve months.

Fig. 1 shows the bolt used on Primaax suspension and the torques figures

The relevant service manual chapters will be amended to reflect this.

NB: Use this bulletin as an update for the Service Manual.

Fig. 1

The bolt pointed out in Fig. 1 should be torqued 540-660Nm (398-486 lbf-ft).
